Customer Reviews

Along Robert Monroe's work, this is widely considered one of the classic books on the subject. This book is an interesting read IF you are looking for very technical parascience that discusses nitpicky details about questions such as "is the astral body made of etheric magnetism or magnetic ether" (note- I made that bit up, but it's really not far off from the approach taken in this book). This book may useful if you are researching historical texts from the early 1900's, perhaps associated with Theosophy and Spiritualism. I personally could not find value in this book, because it is essentially an attempt to look at astral projection from a scientific lens. This in itself is interesting, because in our scientific age many people seem to feel a need to find "empirical scientific evidence" to justify

their ideas about things that may simply be beyond the senses, i.e. "extra sensory". [if you are wondering why this might be, I would very strongly recommend reading "SSOTBME" by Ramsey Dukes... look into it]If you find it interesting to read about other peoples experiences with astral projection, I hesitantly say you may find this book interesting. I hesitate because it is a very slow, dry and boring read, and if you simply want to read tales about otherworldly phenomena you may prefer Monroe's books...My ultimate recommendation, though, is to avoid these books altogether and actually try to get some practical experience of astral projection. Why do you really want to read about other people's experiences , when you could be having your own? These books are definitely not very practical, no matter what claims they may make.
